

CPAP resupply & sleep-therapy commerce platform

Platform Feature Guide

Capabilities organized by operating role

DME OWNER

BILLER

CUSTOMER SERVICE REP

RESPIRATORY THERAPIST

Why PennFit

One platform for the storefront, the resupply program, the clinic, and the revenue cycle — with AI working in every seat.

Most DME operations run on a patchwork: a billing system here, a resupply vendor there, phone scripts everywhere. PennFit replaces the patchwork with one AI-native platform built specifically for CPAP resupply. Seven capabilities set it apart.

01 AI mask fitting, no appointment

A patient's phone camera measures their face right in the browser and scores every available mask for fit. Images never leave the device — and none of the compared platforms offer anything like it.

02 A voice agent that takes reorders

Patients call and a natural AI voice confirms identity, takes the resupply order, and writes a structured summary with sentiment and clinical flags — 24/7, with no hold queue.

03 Resupply that runs itself

Device-reported usage and supply schedules trigger SMS and email reminders with signed one-tap confirm links; confirmed orders flow straight to fulfillment and billing.

04 Denial recovery ranked by dollars

AI claim scrubbing catches problems before submission, and the denials worklist ranks every denial by recoverable value weighted by win probability — billers always work the highest-payoff claim first.

05 Every channel, one inbox

SMS, MMS, email, chat, and call summaries land in a single triage queue with assignment, priorities, and consent and quiet hours enforced automatically.

06 Therapy data from all three clouds

Nightly sync from ResMed AirView, Philips Care Orchestrator, and React Health drives CMS 90-day compliance tracking, clinical worklists, and resupply timing.

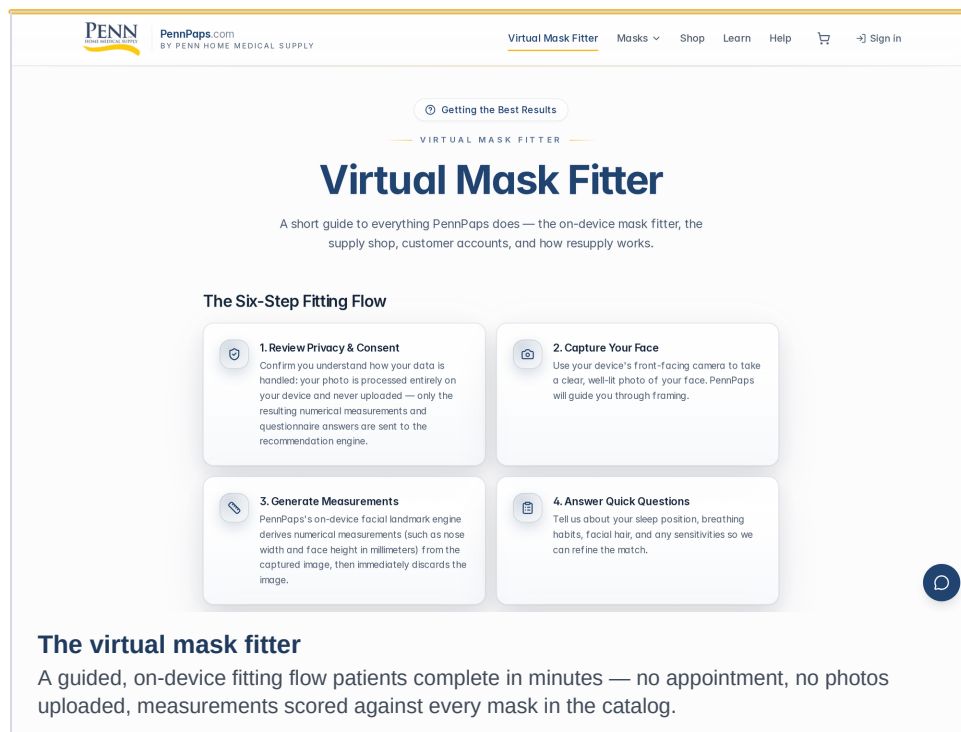

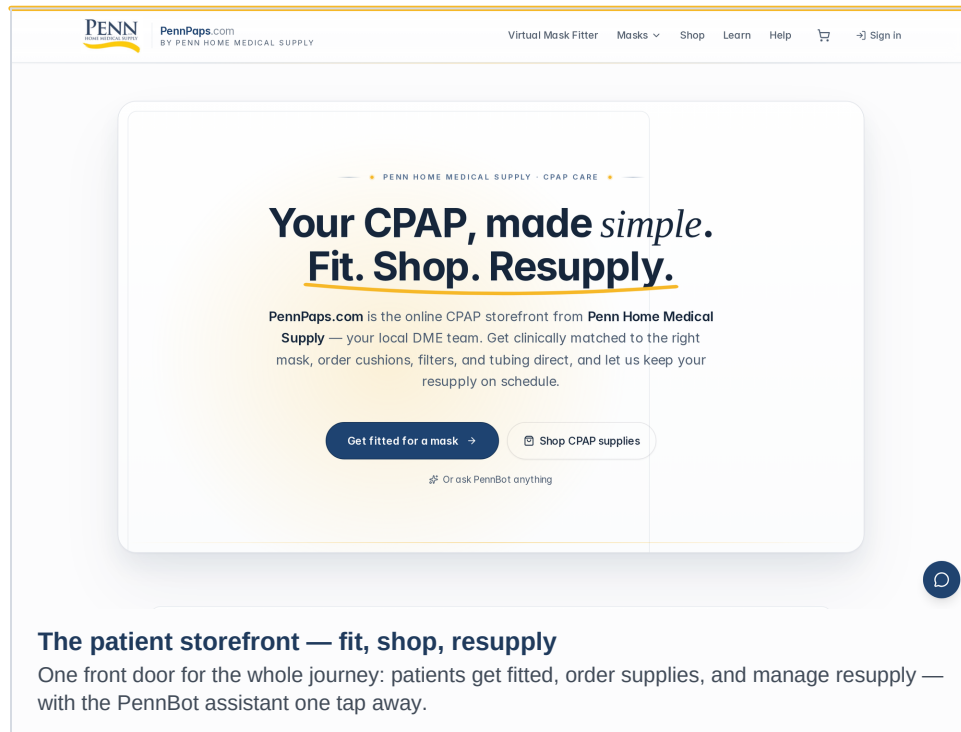

07 One software for the whole PAP department

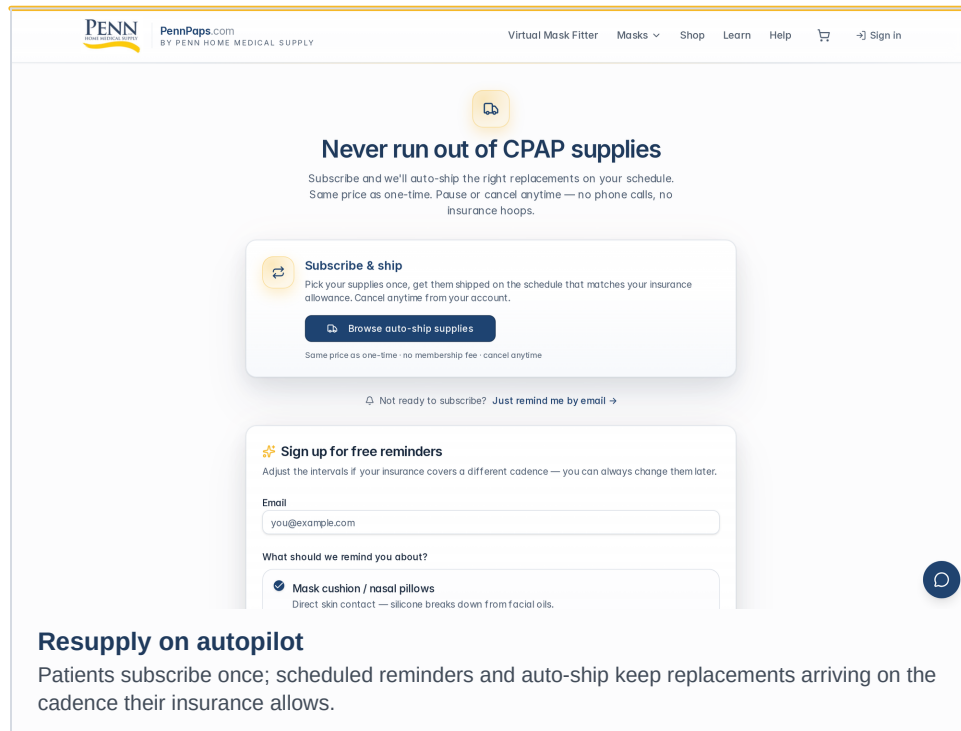

Inventory, billing, the customer database, clinical care, and documentation in a single system — from attracting patients, to fitting them, to ordering supplies, to billing and customer service. No swivel-chair between systems, no per-module pricing, no integration projects.

A feature-by-feature comparison against Brightree + ReSupply, NikoHealth, and TIMS Software appears in the appendix.

PennFit in action

The screens below are the live product — the storefront a patient lands on, the fitting flow they complete in minutes, and the resupply program that keeps supplies arriving.

The screenshot shows the PennPaps website header with the logo and navigation links. The main content area features a large heading "Never run out of CPAP supplies" with a subtext explaining the subscription service. Below this is a "Subscribe & ship" section with a "Browse auto-ship supplies" button. A "Sign up for free reminders" section includes an email input field and a selection for reminder topics, with "Mask cushion / nasal pillows" selected. A floating chat bubble is visible on the right side.

Never run out of CPAP supplies

Subscribe and we'll auto-ship the right replacements on your schedule. Same price as one-time. Pause or cancel anytime — no phone calls, no insurance hoops.

Subscribe & ship

Pick your supplies once, get them shipped on the schedule that matches your insurance allowance. Cancel anytime from your account.

[Browse auto-ship supplies](#)

Same price as one-time · no membership fee · cancel anytime

Not ready to subscribe? [Just remind me by email](#)

Sign up for free reminders

Adjust the intervals if your insurance covers a different cadence — you can always change them later.

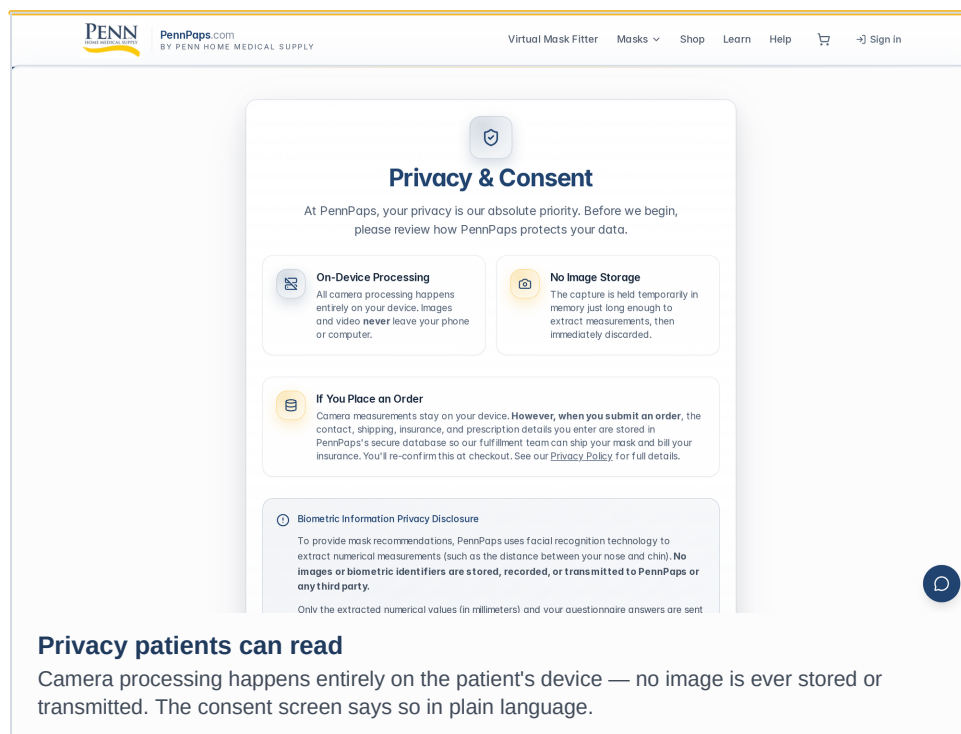

Email

What should we remind you about?

☒ **Mask cushion / nasal pillows**
Direct skin contact — silicone breaks down from facial oils.

Resupply on autopilot

Patients subscribe once; scheduled reminders and auto-ship keep replacements arriving on the cadence their insurance allows.

The screenshot shows the PennPaps website header. The main content area features a "Privacy & Consent" section with a heading and introductory text. Below this are four sections: "On-Device Processing", "No Image Storage", "If You Place an Order", and "Biometric Information Privacy Disclosure". A floating chat bubble is visible on the right side.

Privacy & Consent

At PennPaps, your privacy is our absolute priority. Before we begin, please review how PennPaps protects your data.

On-Device Processing

All camera processing happens entirely on your device. Images and video **never** leave your phone or computer.

No Image Storage

The capture is held temporarily in memory just long enough to extract measurements, then immediately discarded.

If You Place an Order

Camera measurements stay on your device. However, when you submit an order, the contact, shipping, insurance, and prescription details you enter are stored in PennPaps's secure database so our fulfillment team can ship your mask and bill your insurance. You'll re-confirm this at checkout. See our [Privacy Policy](#) for full details.

Biometric Information Privacy Disclosure

To provide mask recommendations, PennPaps uses facial recognition technology to extract numerical measurements (such as the distance between your nose and chin). **No images or biometric identifiers are stored, recorded, or transmitted to PennPaps or any third party.**

Only the extracted numerical values (in millimeters) and your questionnaire answers are sent

Privacy patients can read

Camera processing happens entirely on the patient's device — no image is ever stored or transmitted. The consent screen says so in plain language.

One platform. Hours back, every day.

Run the entire PAP department — attracting patients, fitting, ordering supplies, billing, and customer service — from one system.

Because PennFit is one software — inventory, billing, the customer database, clinical care, and documentation together — the handoffs that used to mean re-keying, portal-hopping, and phone tag simply disappear. The estimates below are illustrative for a typical single-location PAP operation (about 1,500 active resupply patients; a team of one owner, one biller, two CSRs, and one respiratory therapist). Tune them to your volumes.

■ Where the time comes from — by feature

Feature	What it replaces	Typical time saved
AI mask fitter	In-person fitting appointments and trial-and-error exchanges	15–30 min per new setup
Reminder engine + voice agent	Outbound reorder calls and voicemail loops	6–10 min per resupply order
Real-time eligibility	Payer phone calls and portal checks	10–15 min per verification
AI scrubbing + ranked denials	Hunting denial causes claim by claim	~15 min per denial worked
Therapy-cloud sync	Pulling three vendor portals for compliance data	~10 min per patient per month
Unified inbox + patient 360	Cross-referencing phone logs, email, fax, and the billing system	30–60 min per rep per day
Fax OCR + e-signature packets	Manual filing, printing, and signature chasing	5–10 min per document
PacWare sync	Re-keying patients and orders into the billing system	3–5 min per record

■ What a day gets back — by role

Role	What changes	Saved per person per day
DME Owner	Live dashboards and KPI alerts replace hand-built reports and spreadsheet checks	~45 min
Biller	Eligibility runs itself; claims arrive scrubbed and denials arrive ranked	~2.0 hrs
Customer Service Rep (each of 2)	Reorders confirm themselves by text, link, or the AI phone agent; one inbox replaces five tools	~2.5 hrs
Respiratory Therapist	Compliance data lands nightly and worklists build themselves	~1.5 hrs

~9.25 STAFF-HOURS BACK PER DAY	~200 HOURS BACK PER MONTH	~\$5,000 PER MONTH (~\$60K/YR) AT \$25/HR
--	-------------------------------------	---

And that is labor alone. Consolidating onto one platform also retires the rest of the stack — the business-management system, the resupply add-on, the e-ordering tool, and the spreadsheets between them — along with the subscriptions and integration upkeep they carry.

Illustrative planning estimates, not a guarantee. Actual savings depend on patient volume, payer mix, and current workflows. Per-task figures reflect the manual workflows each feature replaces; the roll-up assumes the team mix above, 21.7 workdays per month, and a \$25/hour fully loaded labor rate (9.25 hrs/day × 21.7 days = ~200 hrs; 200 hrs × \$25 = ~\$5,000/month, ~\$60,000/year).

About this guide

PennFit is the operating platform for a modern CPAP/DME resupply business: one system that runs the patient storefront, the resupply program, clinical adherence work, the revenue cycle, and every patient conversation — voice, text, email, and chat — with AI working alongside staff at each step. This guide organizes the platform's capabilities around the four seats in a DME operation. Each section lists the features that role works in day to day, with a brief description of what each one does.

Access in PennFit is enforced by staff roles and thirty granular permissions, so each team member sees exactly the tools their job requires. Features below are listed under the role that uses them most; many are shared. The guide closes with Platform Foundations — the capabilities every role relies on — and a competitive matrix placing PennFit's top features beside the leading DME software.

4 OPERATING ROLES	100+ ADMIN SCREENS	9 PARTNER INTEGRATIONS	24/7 AI VOICE, CHAT & EMAIL
-----------------------------	------------------------------	----------------------------------	---------------------------------------

■ Inside this guide

01	DME Owner	Run the business: visibility, performance, and control.
02	Billor	Keep claims clean and cash flowing.
03	Customer Service Rep	Own every patient touchpoint, end to end.
04	Respiratory Therapist	Keep patients adherent, comfortable, and supplied.
+	Platform Foundations	The shared engine underneath every role.
+	Competitive Matrix	PennFit's top features beside the leading DME software.

— ROLE 01

DME Owner

Run the business: visibility, performance, and control.

The owner's seat is about visibility and control: a live command center for today's business, financial analytics that show where margin is made and lost, levers for goals and staffing, and the switches that configure how the entire platform behaves — no developer required.

Typical access — administrator role: team management, system configuration, business targets, and cost analytics permissions.

■ Command Center & Business Health

Today Dashboard	A day-at-a-glance home screen: revenue, compliance, and contact-rate KPI tiles, today's worklist, team staffing, and queue depth — the morning huddle on one page.
Billing Hub Overview	Executive revenue-cycle dashboard: A/R aging, days sales outstanding, collections forecast, top payers, and denial rate at a glance.
Goals & Targets	Set KPI targets by period — revenue, orders, compliance — and track pace-to-goal against actuals.
KPI Alerts	Automatic alerts when a metric such as revenue, denial rate, or churn crosses a threshold you define; review the alert feed and tune the rules.
Reports & Exports	One-click reporting with CSV, PDF, and QuickBooks (IIF/QBO) exports, plus saved presets for recurring reports.

■ Growth & Financial Analytics

Margin & COGS	Gross-margin tracking overall and per product, with cost captured at invoice time.
Revenue by Source	Order volume and cash by channel — storefront, resupply program, or clinical referral.
LTV & CAC	Customer lifetime value versus acquisition cost by channel, with the ratio that shows where to invest.
Payer Profitability	Net yield by payer: billed versus allowed versus collected, denial rates, and net-of-cost performance.
Inventory Turnover	Turnover per SKU (cost of goods sold against inventory value), plus demand lost to stockouts.

Acquisition Funnel	Visitor drop-off from mask-fitter start through checkout, showing exactly where prospects leave.
Outreach Attribution	Which outreach channels actually convert: the percentage of contacted patients who went on to order, by channel.
Channel Engagement	SMS, email, chat, and phone response rates paired with order conversion.
Customer NPS	Post-delivery satisfaction scores (1–10) with patient comments and trend over time.
Storefront Analytics	Web-traffic and revenue analytics for the storefront, including funnel events.

■ Team & Performance

Team Management	Invite staff, assign administrator or agent roles, tailor thirty granular permissions per person, enforce MFA, and deactivate accounts.
Team Throughput	Per-rep productivity: conversations closed, returns approved, interventions resolved.
Live Staffing	Real-time view of open-conversation load per agent and the overall backlog.
Calendar & Closures	Shared team schedule, plus holiday and weather closures that automatically tell texting patients you're closed.
Locations	Manage multiple branches and assign patients to a servicing location.

■ Platform Control & Configuration

Control Center	Master on/off switches for major capabilities — voice agent, campaigns, AI billing, email auto-reply — applied instantly, with no deploy.
Settings & Setup	Practice identity (name, contact, logo, service area) plus a guided launch checklist covering every integration credential.
Automation Rules	Build trigger-to-action rules (inbound keyword, order placed, therapy event) and dry-run them in the rule tester before going live.
Operations Health	Background-job health, queue depth, and connection status for every partner integration, including nightly-sync results.
Connection Tests	Send a real test email, SMS, or phone call to prove credentials work before patients are affected.
Bot Playground	Rehearse the AI chat and voice agents against scripted scenarios with synthetic data to tune behavior safely.
Webhook Deliveries	Monitor outbound event feeds to partner systems and re-queue failed deliveries.

— **ROLE 02**

Biller

Keep claims clean and cash flowing.

PennFit gives the biller a complete revenue-cycle cockpit: prioritized claim worklists with AI assistance, real-time eligibility, denial recovery ranked by dollars, full A/R and collections tooling, and direct connections to Office Ally, Da Vinci PAS prior authorization, and PacWare.

Typical access — agent role: billing worklists and tools, reports, and patient-update permissions.

■ Daily Claim Worklists

AI Billing Queue	Claims blocked by the scrubber or flagged by the denial analyzer, each with AI-suggested fixes and a one-click resubmit.
Auto-Submit Queue	Scrubber-clean claims with verified eligibility, ready to transmit in batch — approve manually or let the scheduler send.
Bill Hold	Claims held from transmission until required paperwork (signed CMN, prescription) arrives; release the moment documents are in.
CMN / DIF Worklist	Draft Certificates of Medical Necessity pre-filled from patient data; complete, print, and fax for signature.
Prior Authorizations	Submit and track prior auths electronically (Da Vinci PAS standard), with SLA risk and expiring-authorization alerts.
Denials Worklist	Open denials ranked by recoverable dollars weighted by win probability, so rework starts with the highest-value claims.

■ Eligibility & Verification

Real-Time Eligibility	On-demand 270/271 eligibility checks through Office Ally, with rejected or inactive coverage surfaced automatically.
Coverage Re-Verification	A standing worklist of coverages due for re-check: never verified, terminating soon, or stale.
Insurance Leads	Benefit-verification requests submitted by storefront shoppers, queued for triage and follow-up.
Good Faith Estimates	Generate and send estimates showing the patient's expected responsibility before service.

■ A/R & Collections

A/R Aging	Open claims bucketed at 0/30/60/90 days with payer drill-down.
Filing Deadlines	Claims ranked by days remaining before each payer's timely-filing window closes.
Secondary Claims	Coordination of benefits: roll the primary payer's leftover balance to the secondary payer.
Patient Statements	Send patient-responsibility statements by email or SMS — consent- and quiet-hours-aware.
Payment Plans & Links	Set up installment plans and send secure payment links for patient balances.
Capped Rentals	13- and 36-month CMS rental-cycle tracking with automatic KH/KI/KX modifier rotation.
Collections Forecast	Projected cash from claims in flight, bucketed by expected landing date.
ERA / 835 Posting	Upload an 835 remittance file and auto-post payer adjudications.
Manual Claim Entry	Key a corrected, void/replacement, or paper-backup claim by hand when needed.
Denials & DSO Analytics	Rolling 90-day denial rate and 180-day days-to-pay, per payer.

■ Billing Configuration & Connections

Payer Profiles	Master payer list with contract terms, fee schedules, and remittance details.
Fee Schedules	Upload allowed amounts per HCPCS/CPT code and payer from CSV.
Modifier Rules	Automatically apply HCPCS modifiers (GA, GZ, KH, and others) by payer and rule.
Denial Codes	Denial-reason catalog with win-probability scoring that powers worklist ranking.
Claim Templates	Per-payer claim formats defining required fields and validation rules.
Clearinghouse	Office Ally SFTP connection for 837P submission and 835/277CA retrieval, with credential tests and a safe offline mode.
Organization Profile	Your DME's NPI, tax ID, and credentials exactly as they appear on claims and estimates.
PacWare Sync	Two-way CSV exchange with PacWare billing: a fill-only patient import that never overwrites existing data, plus verified roster and resupply-due exports.

 ROLE 03

Customer Service Rep

Own every patient touchpoint, end to end.

Everything a CSR needs to own the patient relationship: a unified inbox across text, email, and phone; complete patient records; outreach tools that respect consent and quiet hours; and full command of orders, returns, and the storefront.

Typical access — agent role: conversations, cases, patient records, returns, and campaign permissions.

■ Unified Inbox & Daily Workspace

Conversations	Every inbound SMS, MMS, and email thread in one triage queue — assign to teammates, set priority, and always know who is waiting on whom.
Email Inbox	Email-specific view with a needs-response bucket, archive, and a reply composer with reusable snippets.
Cases	Multi-channel tickets that link related conversations, orders, and faxes into one case tracked to closure.
Episodes	Open service episodes — callback requests, therapy issues, pending returns — with due-date tracking.
Follow-Ups	Scheduled callbacks and appointments in a today-first queue; complete or reschedule in a click.
Appointment Requests	Patient-initiated requests to accept, decline, or counter with an alternate time.
Delivery Failures	Bounced texts and emails plus carrier shipping exceptions, queued for follow-up.

■ Patient Records

Patient 360 View	Searchable roster opening to a complete patient timeline: profile, orders, therapy data, messages, documents, and notes in tabs.
Duplicate Review	Likely duplicate records detected by name, phone, email, and date-of-birth similarity, with a guided merge.
Patient Documents	File prescriptions, CMNs, and agreements with OCR and automatic document-type detection.
E-Signature Packets	Queue documents for electronic signature and track every packet from sent to signed to filed.

■ Outreach & Messaging Tools

Resupply Reminders	Scheduled SMS and email resupply reminders per patient; trigger a manual send or bulk-import schedules.
Bulk Campaigns	Build an audience by filters (adherence, therapy type, payer), draft the SMS or email, schedule the send, and track delivery and opt-outs.
Alert Library	One-off curated alerts to a single patient by text, email, or automated phone call.
Canned Replies	Reusable snippets for fast, consistent manual replies.
Message Templates	System-message templates with variables, plus per-payer or per-patient copy overrides.
Click-to-Dial & Call Review	Call patients straight from their record, then review AI transcripts, summaries, and sentiment from every voice-agent call — with human-handoff flags.

■ Orders, Shop & Fulfillment

Orders & Order Detail	All storefront orders from pending to delivered: line items, shipping, refunds, re-sends, notes, and proof-of-delivery.
Subscriptions	Recurring supply orders: pause, resume, cancel, or change items and delivery dates.
Returns & RMAs	Return-request queue with approve/deny, refunds, reason codes, and restock tracking.
Backorders & Substitution	Mark items out of stock and define automatic substitute rules so orders keep moving.
Inventory & Reconciliation	Product catalog with stock and cost, plus a monthly count workflow with variance reporting.
Reviews & Product Q&A	Moderate customer product reviews and answer shopper questions.
Cart Recovery & Restock Alerts	Recover abandoned carts with automatic emails and notify subscribers when items come back in stock.
Fitter Prospects & Invites	Invite patients to the AI mask fitter, see their scored results, and convert supply-campaign leads.

— ROLE 04

Respiratory Therapist

Keep patients adherent, comfortable, and supplied.

Clinical tools built around adherence: device data flows in nightly from the major therapy clouds, at-risk patients surface automatically, and documentation, interventions, coaching, and provider paperwork all live in one place.

Typical access — agent role: clinical read/write, interventions, compliance, and patient-record permissions.

■ Therapy Monitoring & Compliance

RT Overview Board	An at-a-glance therapy board surfacing patient alerts — low usage, high leak, rising AHI — filterable by compliance status.
Connected Device Data	Nightly sync from ResMed AirView, Philips Care Orchestrator, and React Health: hours of use, AHI, leak, and mask fit for every connected patient.
Setup Adherence (CMS 90-Day)	Medicare setup-cohort tracking against the 4-nights-per-week, 4-hours-per-night rule, flagging at-risk patients early.
Compliance Rules	Per-payer adherence thresholds that drive flagging and worklists.
Therapy Fleet	Population-level compliance cohorts for proactive clinical outreach.
Therapy Usage Report	A provider-ready, print-quality adherence snapshot by provider, patient, or manufacturer.

■ Clinical Workflows

Clinical Encounters	Document patient visits with assessment, interventions, and outcomes in structured notes.
Interventions Worklist	Non-adherence interventions organized by cause — equipment, side effects, travel — with care plans tracked to outcome.
Mask-Fit Feedback	Patients reporting leak or discomfort, triaged into a follow-up queue.
Adherence Coaching	Structured outreach plans for patients slipping on therapy, with scheduling and message tracking.
Clinical Outreach	Supportive check-ins for patients with open interventions — consent- and do-not-disturb-aware.
RT Outcomes	Per-therapist dashboard: patient load, encounters, interventions, and outcomes.

Equipment Recalls	Manufacturer recall registry scanned against dispensed serial numbers, with patient notification.
--------------------------	---

■ Resupply & Prescriptions

Resupply Opportunities	Device-reported supplies due for replacement — masks, cushions, filters — driving timely reorders.
-------------------------------	--

Prescriptions & Renewals	Track prescriptions and expirations; optionally auto-draft renewals from therapy data.
-------------------------------------	--

Patient Clinical Profile	Diagnosis dates, baseline AHI, comorbidities, and delivery notes on every patient record.
---------------------------------	---

■ Provider Collaboration & Intake

Provider Registry	NPPES-backed physician and nurse-practitioner directory tied to prescriptions and orders.
--------------------------	---

Provider E-Signature	Stage documents for provider signature and track the signed queue.
-----------------------------	--

Inbound Fax Triage	OCR-processed inbound faxes auto-routed by type — sleep study, prescription, chart note — into a triage queue.
---------------------------	--

Patient Education Library	Curate the short-video library patients see, from mask comfort to troubleshooting.
----------------------------------	--

AI Clinical Flags	Every AI voice call ends with a structured summary noting clinical concerns, patient sentiment, and recommended human follow-up.
--------------------------	--

— SHARED

Platform Foundations

The shared engine underneath every role.

Beneath the four role workspaces sits a shared platform layer. These capabilities serve patients directly or protect the business as a whole, and every role benefits from them.

Patient Storefront & Portal	A full e-commerce storefront with Stripe checkout, subscriptions, order tracking, returns, document access, insurance details, and caregiver access — backed by a self-service patient account portal.
AI Mask Fitter	Camera-based facial measurement in the patient's browser scores every available mask for fit. Images never leave the device — only numeric measurements are transmitted.
Resupply Reminder Engine	Automated SMS and email reminders with signed one-tap confirm and decline links, quiet-hours awareness, and unsubscribe handling.
AI Voice Agent	A natural-voice phone agent that takes reorders, runs reminder and check-in calls, hands off to staff on request, and writes a structured summary of every call.
Chatbot & Sleep Coach	Patient-facing AI chat for shopping help and therapy coaching, with optional high-confidence email auto-reply; anything uncertain hands off to staff.
PennPilot Admin Assistant	An in-app AI helper on every admin page that answers “how do I” questions about the console and forwards staff feature ideas to ownership — always confirming before anything is sent.
Security & Privacy	Hardened sign-in with optional MFA, role-based access with thirty granular permissions, CSRF and rate-limit protection, and strict PHI discipline: camera images and order payloads are never logged.
Always-On by Design	Feature flags flip capabilities instantly, vendor outages degrade gracefully instead of taking the site down, and background jobs handle syncs, reminders, and campaigns around the clock.

APPENDIX

Competitive Feature Matrix

PennFit's top features beside the leading DME software.

The matrix below positions PennFit's marquee features against the DME/HME platforms a resupply business is most likely to evaluate: Brightree with its ReSupply module (the established business-management incumbent), NikoHealth (a modern HME/DME billing and operations platform), and TIMS Software (a long-standing HME suite).

● Included natively ◐ Partial, add-on, or via partner ○ Not offered / not core

Feature	PennFit	Brightree + ReSupply	NikoHealth	TIMS Software
PATIENT EXPERIENCE				
AI camera-based mask fitting, in-browser and privacy-first	●	○	○	○
Patient e-commerce storefront, subscriptions, and cash-pay	●	◐	◐	◐
Automated resupply outreach with one-tap confirm (SMS/email)	●	●	◐	◐
Conversational AI voice agent for reorders and check-ins	●	◐	○	○
Patient AI chatbot and sleep coach	●	○	○	○
CLINICAL & THERAPY				
Therapy-cloud device data sync (ResMed, Philips, React Health)	●	●	◐	◐
CMS 90-day setup-adherence tracking	●	●	◐	◐
Clinical intervention, coaching, and mask-fit worklists	●	◐	○	○
Inbound fax OCR and document triage	●	●	◐	◐
REVENUE CYCLE				
Clearinghouse claims (837P/835) and real-time eligibility	●	●	●	●
AI claim scrubbing and denial recovery ranked by win probability	●	◐	◐	○
Electronic prior authorization (Da Vinci PAS)	●	◐	○	○
DME A/R suite: capped rentals, secondary claims, timely filing	●	●	●	●

Feature	PennFit	Brightree + ReSupply	NikoHealth	TIMS Software
Patient statements, payment plans, and payment links	●	●	●	●
OPERATIONS & INTELLIGENCE				
Unified omnichannel inbox (SMS, MMS, email)	●	◐	◐	○
Provider e-signature and e-ordering collaboration	●	◐	◐	○
Business analytics: margin, LTV/CAC, payer profitability	●	◐	◐	◐
In-app AI staff assistant and no-code automation rules	●	◐	◐	○

PennFit entries reflect the shipped platform described in this guide. Competitor entries are a good-faith summary of publicly available product information as of June 2026; offerings change frequently and several vendors deliver additional capabilities through partners or paid add-ons. Verify with each vendor before using this comparison in customer-facing material.
